

## NEW OPTION...Submit Reviews Online

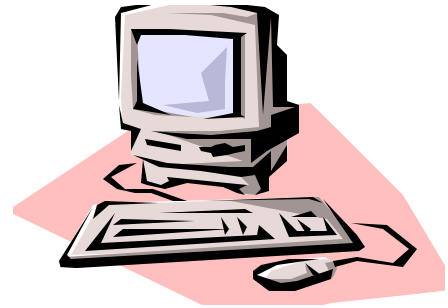

HealthSystems is pleased to introduce and offer providers the option of submitting certification reviews through the use of Electronic Submission. Through a team effort with The Division of Medicaid (DOM) and various home health representatives, HSM has developed a Web based electronic review request system for home health providers that will enable providers to effectively submit review requests electronically via the Web.

Through HSM's new Web based system, home health providers will also be able to verify current and previous review volumes and outcomes, and access treatment authorization numbers (TANs).

## What will on-line reviews do for YOU?

- ❑ The on-line entry screens will provide a more efficient transfer of information.
- ❑ There will be less paper handling on both ends.
- ❑ The reporting module will provide real-time status inquiry of reviews.

## What do you need to use the System?

- ❑ A provider will need Internet access for the personnel who will be submitting certification requests and accessing the reporting module.
- ❑ Multiple requestors and simultaneous transmission from multiple PCs within a facility are allowed (each will be tracked via a separate login).
- ❑ A typical personal computer with Internet access is all that is needed. If you can get to HSM's Web page at "www.hsom.org", then you have what you need to utilize the system. The following are the low end specifications for a system:
  - Pentium 133 with 16mg RAM and 5 mg free disk space for drivers
  - Color monitor
  - 28.8K modem connection or higher (phone line quality will determine connect speed. Current PC modems are 56K)
